Assessment Completed!

Task 5. Test your understanding

Below are multiple choice questions to reinforce your understanding of this lab's concepts. Answer them to the best of your abilities.

BigQuery is a fully-managed enterprise data warehouse that enables super-fast SQL queries.

☒ True

☐ False

Which option best describes what BigQuery ML does?

☐ Creates machine learning models using Python or Java in BigQuery, then executes the model using standard SQL queries.

☒ Creates and executes machine learning models in BigQuery using standard SQL queries.

Congratulations!

You used BigQuery ML to create a binary logistic regression model, evaluate the model, and use the model to make predictions.

Next steps / Learn more

- For more information on BigQuery ML, see the [documentation](#).
- Have a Google Analytics account and want to query your own datasets in BigQuery? Follow this [export guide](#).
- The complete BigQuery SQL reference guide is here as an additional resource: <https://cloud.google.com/bigquery/docs/reference/standard-sql/query-syntax>

Lab instructions and tasks

GSP247

100/100

Overview

Setup and requirements

Task 1. Create a dataset

Task 2. Create a model

Task 3. Evaluate the model

Task 4. Use the model

Task 5. Test your understanding

Congratulations!

1. Creación BD automóviles
2. Creación colección Vehículos
3. Insertar data en colección Vehículos

Documents 11 Aggregations Schema Indexes 1 Validation

Type a query: { field: 'value' } or [Generate query](#) ⚡

Explain Reset Find `</>` Options ▶

ADD DATA EXPORT DATA UPDATE DELETE 25 1 - 11 of 11

```
{
  "_id": ObjectId('6789b307221004d8224db7f6'),
  "marca": "Toyota",
  "modelo": "Corolla",
  "color": "Azul"
}
```

```
{
  "_id": ObjectId('6789b43e221004d8224db7f8'),
  "marca": "Honda",
  "modelo": "Civic",
  "color": "Azul"
}
```

```
{
  "_id": ObjectId('6789b46e221004d8224db7f9'),
  "marca": "Ford",
  "modelo": "Focus",
  "color": "Blanco"
}
```

4. Realizar Filtros

Filtrar vehículos color Rojo
